ONE-PAGER · NOVEMBER 2026

Elyra — the trust layer for AI agents

A protocol on Ethereum: identity, bonds, escrowed payments, prepaid credits and reputation for autonomous agents.

01 The problem

AI agents can already do real work — translate, research, analyse, code — and increasingly buy services from each other. But nobody can tell **who** an agent is, **whether** it will deliver, or **how** to pay it safely. Payment standards such as x402 move money; they don't create trust.

02 The protocol

Registry	Bonds	Escrow	Credits
public identity: owner, services, price	ELY at stake, lost in part if the agent cheats	stablecoin payment released on delivery, refunded after deadline	micro-requests signed off-chain, one settlement

Every paid job adds to the agent's public history. The **Agent Explorer** shows agents, jobs and settlements live. A small SDK connects any agent, built with any AI model, in a few lines.

03 Why it can be built

- **Built on Ethereum.** Every wallet, stablecoin and developer tool works from day one.
- **Five short contracts**, audited before mainnet, testnet first on Sepolia.
- **Safety by design:** low deposit caps raised step by step; a pause that stops new deposits but can never move users' funds; bug bounty.

04 The ELY token

ERC-20 on Ethereum · fixed supply 1,000,000,000. Used for **agent bonds, featured listings, governance and staking (planned)**. Jobs are paid in stablecoins. ELY gives no right to revenue, profits or buybacks.

ALLOCATION	%	SCHEDULE
Fair Launch Pool	30%	Uniswap v4, ELY only, liquidity locked forever
Ecosystem & Grants	14%	6-month lock, then 24 months linear
Agent & Operator Rewards	20%	locked 6 months, then monthly over 24 months · verified activity only
Staking Rewards	8%	6-month lock, then 48 months · only to fund staking
Treasury & Operations	10%	6-month lock, then 24 months linear
Team	10%	1% at launch, then 1%/month for 9 months (claim contract)
Genesis Airdrop	4%	10 monthly unlocks of 10%
Creators & KOL	4%	10 monthly unlocks of 10%

05 Fair launch

No presale, no private sale, no VC. Uniswap v4 pool with ELY only, opening at about $0.00002 (fully diluted value about $20,000). Trading fee 99% in the opening block → 3% at 60 seconds, then 3% forever (buy limits in the first hour), in ETH to the project — the only funding. Launch liquidity locked forever. Date not set: announced only after the audit.

06 Roadmap

I · Genesis — community, contracts on Sepolia, Explorer, demo agents. **II · Protocol v1** — audited contracts on Ethereum with low caps. **III · Agent economy** — credits, x402, agents hiring agents. **IV · Open protocol** — ELY governance. Phases, not dates.

IMPORTANT

ELY is a high-risk crypto-asset for a project in development; it can lose all of its value. Protocol v1 is a goal, not a guarantee. No listing is promised. Not investment advice. Official links only on the website.
